

Survey Feedback Analyzer -

Executive Summary

1. Overview & Baseline Metrics

- **Total Tickets Processed:** 11 Tickets (10 preloaded + 1 added manually)
- **Priority Breakdown:** High: 5 (45.5%) | Medium: 3 (27.3%) | Low: 3 (27.3%)
- **Unique Vocabulary Extracted:** 31 unique words across all cleaned descriptions

2. Priority & Operational Summary

Priority Level	Ticket Count	Percentage	Primary Impacted Area
High	5	45.5%	Network Downtime & Technical Failure
Medium	3	27.3%	General Inquiries & Guidance
Low	3	27.3%	Feedback & Speed Complaints

3. Key Analytical Insights

- **High Severity Bottlenecks:** High-priority tickets account for nearly half of all service requests (45.5%), driven primarily by critical technical issues like connectivity outages ("internet not working").
- **Service Performance Sentiment:** Keyword analysis highlights recurring operational bottlenecks regarding response speed. Terms like "slow" (2 occurrences) and "poor" (2 occurrences) dominate negative feedback.
- **Customer Satisfaction Signals:** Positive service experiences highlight team guidance and behavior, featuring positive keywords such as "good" (2 occurrences) and "excellent" (1 occurrence).
- **Text Complexity Analysis:** Ticket #2 (Customer: Meera) contained the longest cleaned issue text ("slow response very poor service") with a total word count of 5 words.

4. Actionable Recommendations

1. Deploy rapid-response technical support teams specifically for internet connectivity failures to lower high-priority ticket volume.
2. Optimize service turnaround time to address customer feedback regarding response latency.
